

Flexmicron Premium (FM-P)

Description

The filter elements of the FlexMicron Premium (FM-P) product line are durable elements, manufactured in meltblown or high-quality fibreglass using pleat technology.

They are designed particularly for use in applications requiring high levels of cleanliness.

Applications

- High-end industrial part washing systems (water-based & hydrocarbon cleaning fluids up to 100 °C)
- Flushing rigs (downstream of part washing systems)
- Test rigs (fuel injection, braking and steering systems)
- Superfinishing with cooling lubricants (honing, grinding, turning, milling, deburring)
- Offline filtration in large hydraulic systems
- Offline filtration in lubrication systems
- Filling systems used in cleanliness applications
- Mining and metallurgy
- Metal-forming (e.g. hydroforming)

Maximum differential pressure Δp_{\max} and permitted temperature range across the element:

Fluid temperature	Filter material
	PES, GF
-10 ... 30°C	8 bar
-10 ... 60°C	6.5 bar
-10 ... 100°C	5 bar

Sizing

The total pressure loss of the filter at a certain flow rate is the sum of the housing Δp and the element Δp_E . The housing pressure drop can be determined using the pressure drop curves in the filter housing datasheet. The pressure drop of the elements is calculated using the R factors.

The following calculation is based on clean filter elements.

$$\Delta p_E [\text{bar}] = \frac{R \cdot V (\text{mm}^2/\text{s}) \cdot Q (\text{l}/\text{min})}{n \cdot L (\text{inch}) \cdot 1000}$$

Δp_E = Element pressure drop [bar]

R = R factor

V = Viscosity (mm²/s)

Q = Flow rate (l/min)

n = No. of elements

L = Element length (inch)

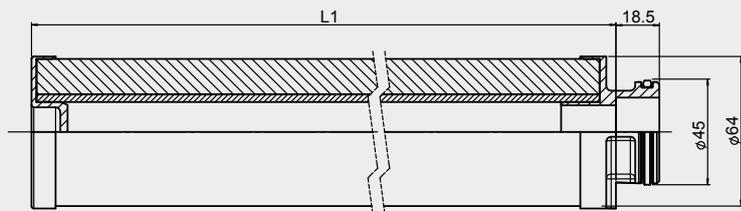

Maximum permitted flow rate for 1 mm²/s

Element length	Maximum permitted flow rate
10"	20 l/min
13"	26 l/min
20"	40 l/min
30"	60 l/min
40"	80 l/min

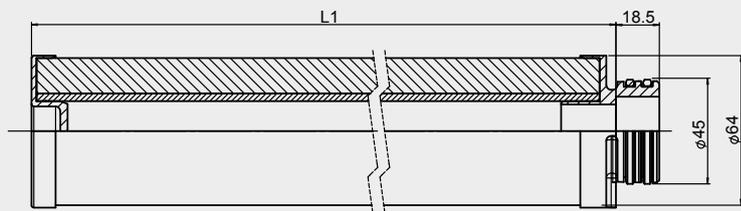

Other flow rates on request.
