

# Zero point clamping system SPEEDY airtec 1

# GO

### **Maximum productivity**

- With the zero point clamping system SPEEDY airtec you will increase your production times to a maximum. Adjustment and checking processes are no longer necessary at all, this means more time for your production.
- With SPEEDY airtec even trainees can undertake set-up work on your production machines. This feature will lower your costs and makes it possible to load several machines at the same time.

#### **Maximum flexibility**

 SPEEDY airtec has a common interface. As a result all equipment can be used on all machines.

#### Maximum machine availability

Machining can be interrupted for rush jobs and completed later without loss of time.

SPEEDY airtec – an investment, that will pay for itself in a very short time.

# STARK clamping systems overview

Differentiation is by the method of actuation and varying size of the retractable nipples:

Most complete and versatile zero point clamping system.

Weight	[ kg ]	4.80	1.10	1.00

\* With appropriate design and adjustments, accuracies in the  $\mu$ -range are possible.

<sup>1</sup> Clamping force	The clamping force refers to the load up to which the zero point is guaranteed. The clamping force stated must not be exceeded.
<sup>2</sup> Retention force	The retention force refers the max. overload at which the nipple will continue to be retained, but the zero point has already been left (designed for M12 screw).
<sup>3</sup> Radial pre-positioning	The loading device must have play in the case of automated handling.
<sup>4</sup> Repeatability	Repeatability generally refers to the accuracy with which the same pallet is positioned on changing on the same interface.
<sup>5</sup> System accuracy	System accuracy refers to the accuracy resulting from changing several pallets, e.g. on different machines.

For data sheets and 3D data see www.stark-inc.com

# Technical data – tilting torque calculation example

profit from our specialist competence

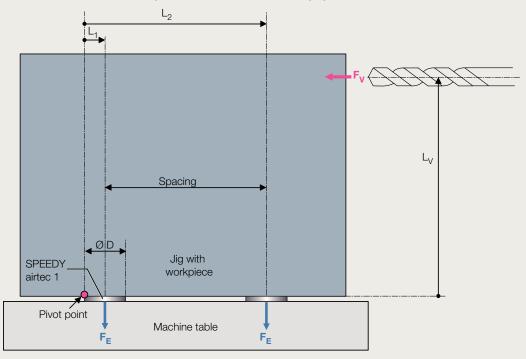

#### Example:

Fast closing clamp plate 4x SPEEDY airtec 1 with 200 x 200 spacing and max. feed force of 7 kN with distance of 400 mm.

#### Question:

Due to the predominance of roughing work, the system is to be checked for double safety. Are the insertion force, number of fast closing clamps and the selected spacing right for this application?

#### Solution:

 $M_{\rm F} > 2 \times M_{\rm V}$ ?

 $M_V = F_V \times L_V = 7,000 \text{ N} \times 0.4 \text{ m}$  $M_{\rm V} = 2,800 \, \rm Nm$  $M_E = 2 \times (F_E \times L_1) + 2 \times (F_E \times L_2)$  $M_{F} = 2 \times F_{F} \times (L_{1} + L_{2})$  $L_1 = OD / 2$  $L_2 = \emptyset D / 2 + Spacing$  $L_1 + L_2 = \emptyset D + Spacing$  $L_1 + L_2 = 0.129 \text{ m} + 0.20 \text{ m} = 0.329 \text{ m}$  $M_E = 2 \times F_E \times (L_1 + L_2) = 2 \times 20,000 \text{ N} \times 0.329 \text{ m}$ M<sub>F</sub> = 13,160 Nm

 $M_{\rm E} / M_{\rm V} > 2$ ?  $M_{\rm F}$  /  $M_{\rm V}$  = 13,160 Nm / 2,800 N  $M_{\rm F} / M_{\rm V} = 4.7 > 2$ 

With this design, safety by around a factor of 4.7 is provided.

(All dimensions to be entered in SI units (metres, Newtons))

M<sub>V</sub>: Moment from feed force M<sub>E</sub>: Moment from insertion force F<sub>V</sub>: Feed force (7,000 N) F<sub>F</sub>: Insertion force (20,000 N) Spacing = 200 mm = 0.20 m Ø D (Bearing ring): 129 mm = 0.129 m  $L_V$ : 400 mm = 0.40 m

# Function description SPEEDY airtec 1 -

# positioning and clamping in one function

Releasing pneumatically:	Clamping mechanically:
Pneumatic pressure (1) is applied to the piston (2) and the piston moves upward. The spiral springs (3) are pressed together.	The pneumatic pressure is relieved. The pneumatic pressure drops to 0bar.
<ul> <li>The clamping fingers (4) move upward through the piston (2) and pull the segments (5) to the outside.</li> </ul>	The spring pre-load is applied via the piston (2), the piston moves downward.
The retractable nipple (6) is released.	<ul> <li>The clamping fingers (4) are pulled down by the piston (2) and push the segments (5) toward the inside.</li> </ul>
	The retractable nipple (6) is pulled down by the clamping face on the segments (5) and clamped against the bearing surface.

Information

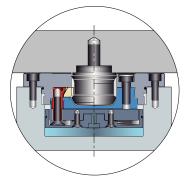

For data sheets and 3D data see www.stark-inc.com

# Proven technology with system -

original down to the smallest detail

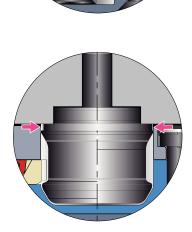

#### Design

- Compact design (Flush Mount, screw-fit or module)
- High retention force, enormous power density
- Maintenance-free, designed for large number of load changes (> 2 million in continuous test)
- Made of high quality tool steel and chromium steel
- Actuation with clean air, from 5bar to release
- Can be operated without additional service unit
- Environmentally friendly and clean operation (no oil)
- Particularly suitable for oil-free environment, e.g in the foodstuffs, aerospace industry or medical sector.

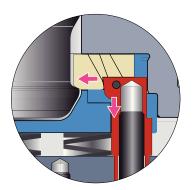

## Positive action operation

- The segments are actuated mechanically
- Powerful and secure clamping is ensured at all times
- In an endurance test over 3 million clamping cycles tested, full functionality even under extreme conditions.
- Functions reliably in any installation position
- Very short clamping and release time 0.2sec

# Cylindrical fit

- Due to the cylindrical fit, high lateral forces can be absorbed by the fast closing clamp during the machining
- Ideal pre-centring for Römheld coupling elements without coupling travel, data sheet F9.461

# Segments

• Due to the optimal all-round positive clamping action of the clamping segments, the retractable nipple is retained stably and securely in the fast closing clamp.

Information

# **STANDARD 155**

#### Flush Mount

Bearing ring

Round ø155mm

**Practical example:** 

#### **Characteristics:**

Flush Mount fast closing clamp made of high quality tool steel.

Due to low height little space needed. Can be installed as a module.

Is clamped mechanically and released pneumatically.

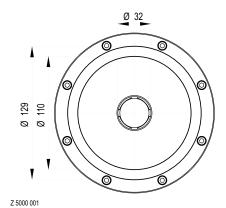

#### **Application:**

For flush mounting in machine pallets, plates, angles, cubes, towers and swivelling yokes.

Can be used for all common machining tasks such as milling, turning, grinding, eroding as well as on test stands for mounting devices.

Particularly suitable for oil-free environment, e.g in the foodstuffs, aerospace industry or medical sector.

# **STANDARD 100**

Flush Mount module

Bearing ring

Round ø100mm

#### **Characteristics:**

Flush Mount fast closing clamp made of high quality tool steel.

Due to low height little space needed. Can be installed as module. Can also be used with low wall thickness.

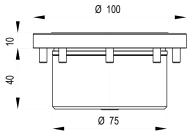

Is clamped mechanically and released pneumatically.

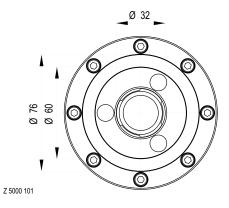

#### **Application:**

For flush mounting in machine pallets, plates, angles, cubes, towers and swivelling yokes.

Can be used for all common machining tasks such as milling, turning, grinding, eroding as well as on test stands for mounting devices.

Particularly suitable for oil-free environment, e.g in the foodstuffs, aerospace industry or medical sector.

Order no.	Retention force	Clamping force	Pressure to release	Weight	Data sheet

# **STANDARD 80**

#### • Screw-fit

Bearing ring

Round ø80mm

#### **Characteristics:**

Flush Mount fast closing clamp made of high quality tool steel.

Due to low height little space needed (can be installed even from plate thickness of 40 mm). Flush Mount variant with fine thread, suitable spanner for installation order no. 5000 310.

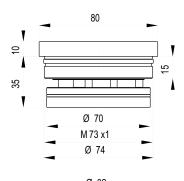

Is clamped mechanically and released pneumatically.

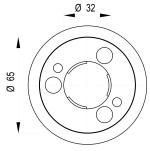

#### **Application:**

For flush mounting in machine pallets, plates, angles, cubes, towers and swivelling yokes.

Can be used for all common machining tasks such as milling, turning, grinding, z5000 201 eroding as well as on test stands for mounting devices.

Particularly suitable for oil-free environment, e.g in the foodstuffs, aerospace industry or medical sector.

Order no.	Retention force	Clamping force	Pressure to release	Weight	Data sheet

E-mail: verkauf@stark-inc.com www.stark-inc.com

#### Your advantages:

Five workpiece changes without zero point clamping system per shift result in approximately 100 minutes of set-up time. During this time it is not possible to machine any workpieces - the machine is stationary! With STARK zero point clamping system, the set-up time during a shift is reduced to 20 minutes, that means 80 minutes more machine running time - the machine is producing!

This means approx. 420 hours (!) additional machine capacity per year.

8x quick change pallet with 3-jaw chuck for 5-sided machining, clamped with 4 SPEEDY airtec 1 with 20kN per fast closing clamp.

8x quick change pallet with machine vice for 5-sided machining, clamped with 4 SPEEDY airtec 1 with 20kN per fast closing clamp.

#### From the bottleneck to the production machine:

The Gantt chart shows further advantages:

- Quality assurance parallel to productive time is a crucial factor due to the short set-up time.
- The batch size is less important.
- Rush jobs can be inserted without problems.

# Set plate 2

#### Surface Mount

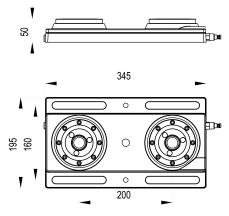

#### **Characteristics:**

The set plate 2 can be used on almost any machine table due to the slots and the sliding blocks with pins. Simple alignment is possible due to the precision bores.

The set plates can thus be rapidly and precisely adjusted by the customer to the grid or T slot tables on any machine table.

#### **Application:**

For surface mounting on machine pallets, plates, angles, cubes, towers and swivelling yokes. Can be used for all common machining tasks such as milling, turning, grinding, eroding as well as on test stands for mounting devices.

Order no.	Retention force*	Clamping force*	Pressure to release	Spacing	Weight

Z 5000 710

\* Retention force and clamping force per fast closing clamp SPEEDY airtec.

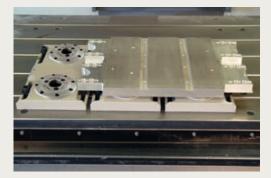

Set contents

1x set plate 2x 2x retractable nipples with zero point 2x retractable nipples with equaliser

order no. 5000 012 order no. 5000 013

#### **Practical example:**

SPEEDY airtec module plate, designed for clamping using 6 fast closing clamps.

Set plate 2

For data sheets and 3D data see www.stark-inc.com

www.stark-inc.com

#### Product information:

Application with coupling elements that do not require any coupling stroke. Römheld data sheet F9.461.

- Positioning using SPEEDY airtec retractable nipples (1)
- Automatic coupling during clamping
- Smooth surface (2) easy to clean the couplings

Coupling elements are used for the provision of hydraulic oil and air, other media on request. The coupling element does not require any coupling stroke, can only be coupled de-pressurised. The necessary positioning is ensured together with the SPEEDY airtec fast closing clamp.

changers to transfer hydraulic oil and compressed air from the machine table to the jigs.

Set plate 2

# **Spanner for installation**

• AF 24

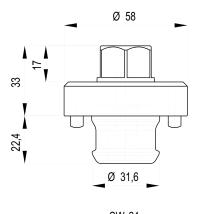

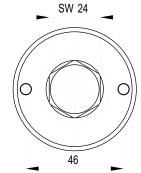

#### **Characteristics:**

Spanner for installation.

#### Application:

Installation and removal of SPEEDY airtec order no. 5000 201.

Order no.	Size	Weight
5000 310	AF24	0.60kg

During assembly pay attention to the torque of 250Nm, as per technical information.

# **Torque wrench**

#### **Characteristics:**

Adjustable torque wrench.

#### **Application:**

Fitting and removing retractable nipples. Note torque data in the related operating instructions!

Order no.	Adjusting range	Weight
804 255	5 – 50Nm	0.60kg
804 256	20 – 100Nm	0.90kg
804 309	60 – 300Nm	1.40kg

During assembly pay attention to the torque, as per technical information.

# Spanner for installation for nipple fastening D / E

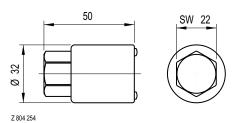

**Characteristics:** 

Spanner for installation for fitting the nipple fastening D / E

#### **Application:**

Installation and removal, nipple fastening D / E, order no. 804 267 and 804 266.

Order no.	Size	Weight
804 254	AF22	0.08kg

During assembly pay attention to the torque, as per technical information.

# Slide coupling

Can be switched

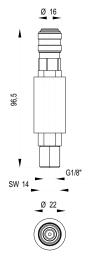

#### **Characteristics:**

Pneumatic coupling element with slide valve for SPEEDY airtec.

#### **Application:**

Actuation of the fast closing clamps SPEEDY airtec.

Order no.	Connection	Weight
5000 300	G1/8"	0.20kg

5000 300

# **Coupling nipple**

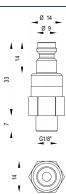

#### **Characteristics:**

Coupling nipple for SPEEDY airtec in conjunction with coupling art. no. 5000 300.

#### **Application:**

For the connection and actuation of the fast closing clamps SPEEDY airtec.

Z 5000 301

Order no.	Connection	Weight
5000 301	G1/8"	0.05kg

# Only the original ...

# ...fits together!

# For this reason our customers receive:

- Manufacturer's guarantee
- Function guarantee
- Warranty protection
- Selection of fits

# STARK zero point clamping systems

Consultation, planning, design, production, mounting, service – everything from a single source!

C ost savings in manufacturing are these days increasingly only possible during machine set-up and by shortening the process times. Your production will be significantly faster by using zero point clamping systems.

Key aspects such as focusing on bottlenecks (TOC), shortening of cycle times, batch sizes and inventory reduction, to name but a few advantages, are implemented quickly in manufacturing by using STARK zero point clamping systems.

Utilise the extensive experience and flexibility of specialists in zero point clamping technology to optimise your production.

The clamping system SPEEDY airtec is robust in use, thanks to its low height and variable spacing it is also very well suited to one-off parts as well as small and large production runs. Due to the special retractable nipple contour and the matched radii, the bore is not damaged on insertion in the SPEEDY. No chips can be jammed in the cylindrical bore and due to the optimal application of force – the retractable nipples are fixed positively and highly accurately by spring action – bending or lifting is not possible and as a result high positioning accuracy is guaranteed.

Positioning, clamping, releasing – SPEEDY airtec integrates everything in one intelligent pneumatic zero point clamping system.
