

High Pressure T- filter

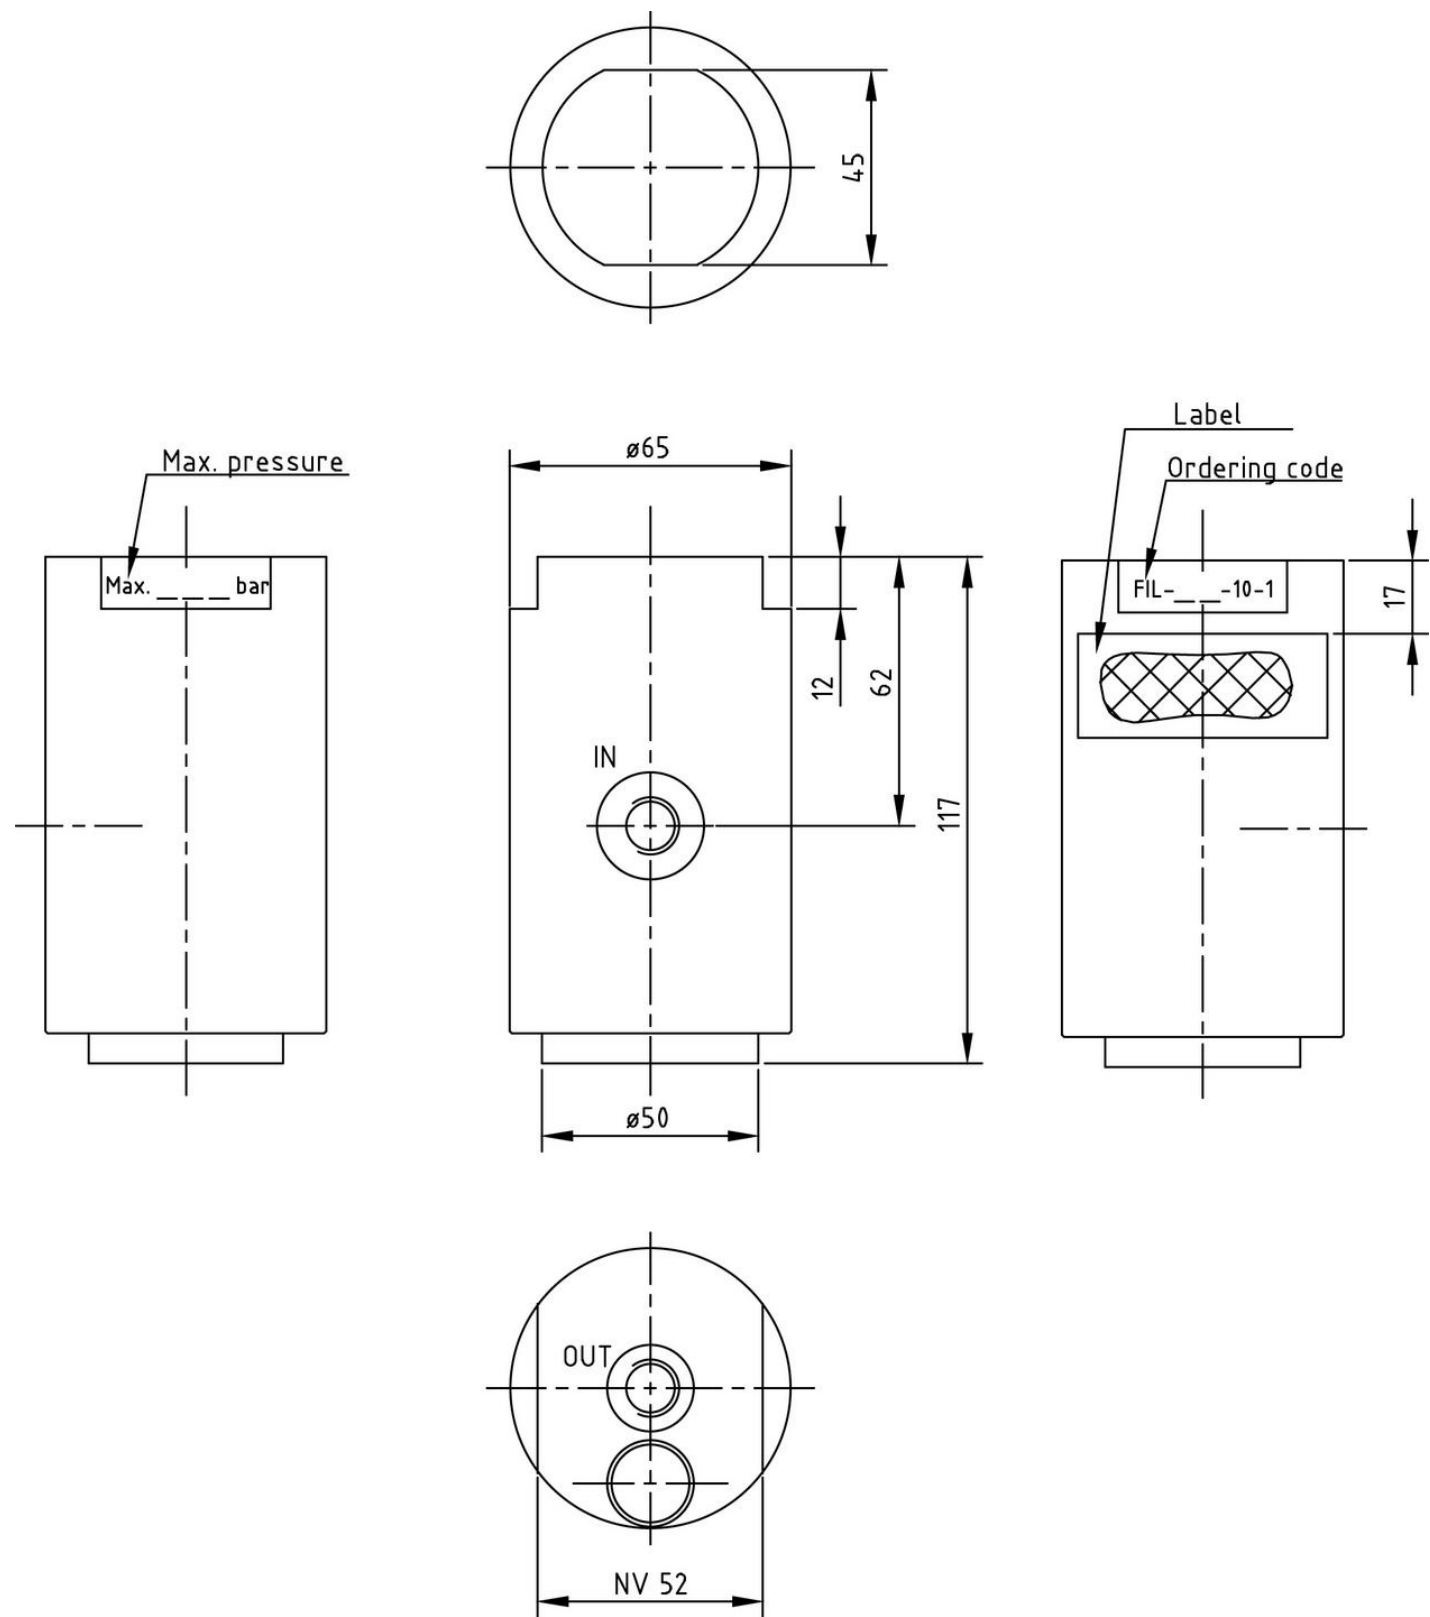

Description

This filter provides protection in hydraulic systems up to 800 bar. It is similar in design and performance to filter models FIL-52T; FIL-53T and FIL-54T with the added advantage that it allows to filter on the high pressure side. The built in check valves protect the filter from return flows. The standard bronze element filter is 10 micron.

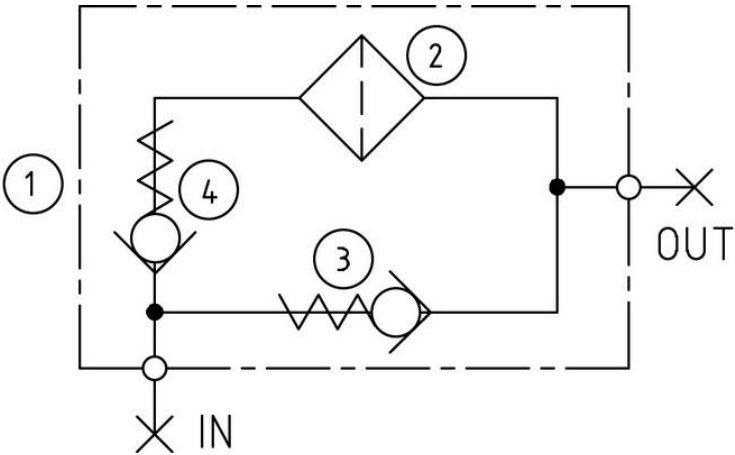

Operating temperatures: 0°C to 100°C

Dimensions

2-122 Model
